

## ASSIGNMENT ON API GATEWAY

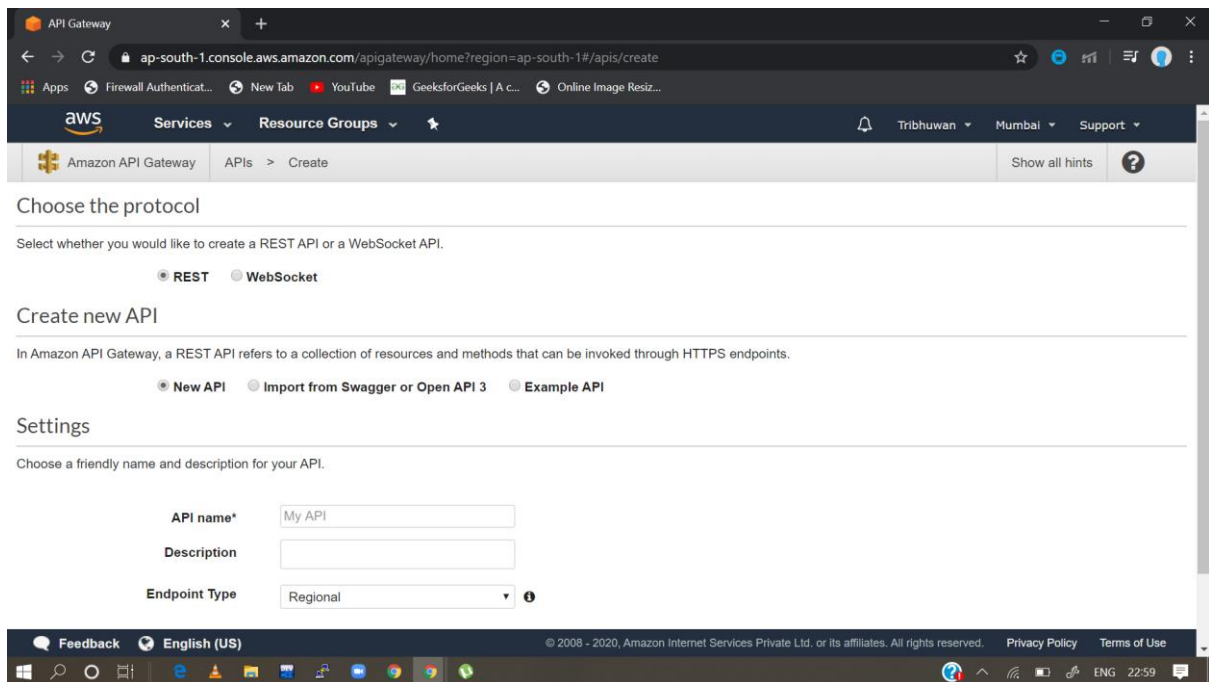

Ques- Create an aws API Gateway

Sol- Steps to create aws api gateway are:

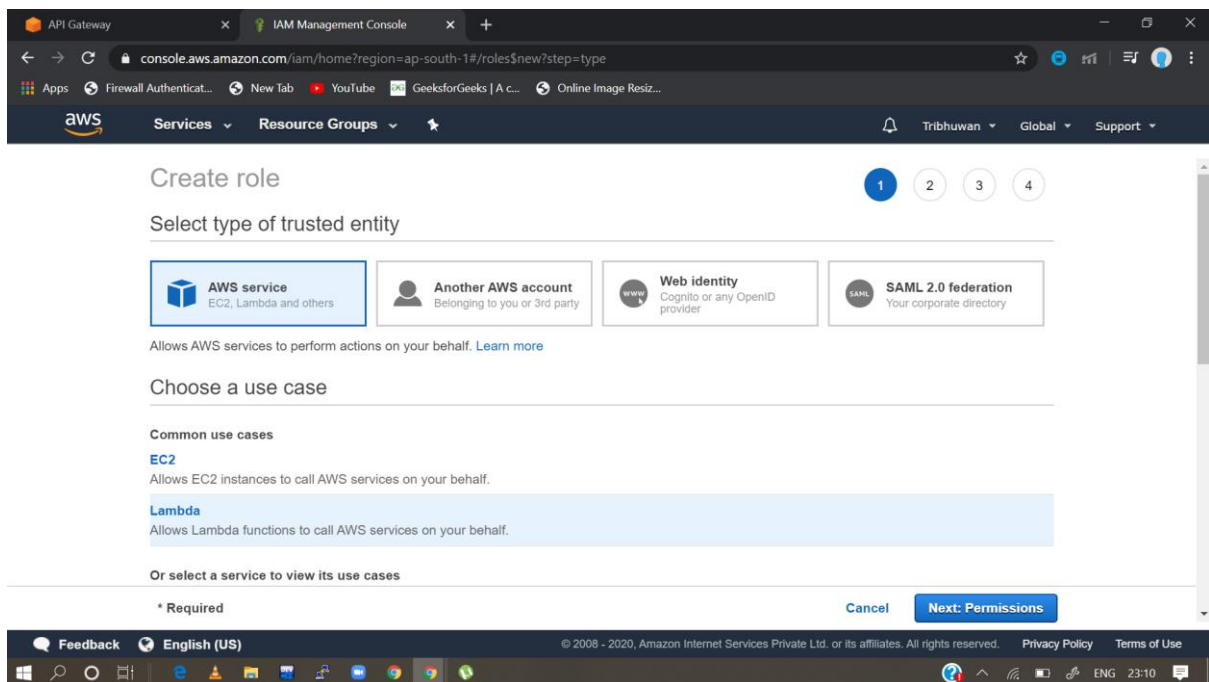

Step1: First go to api gateway console

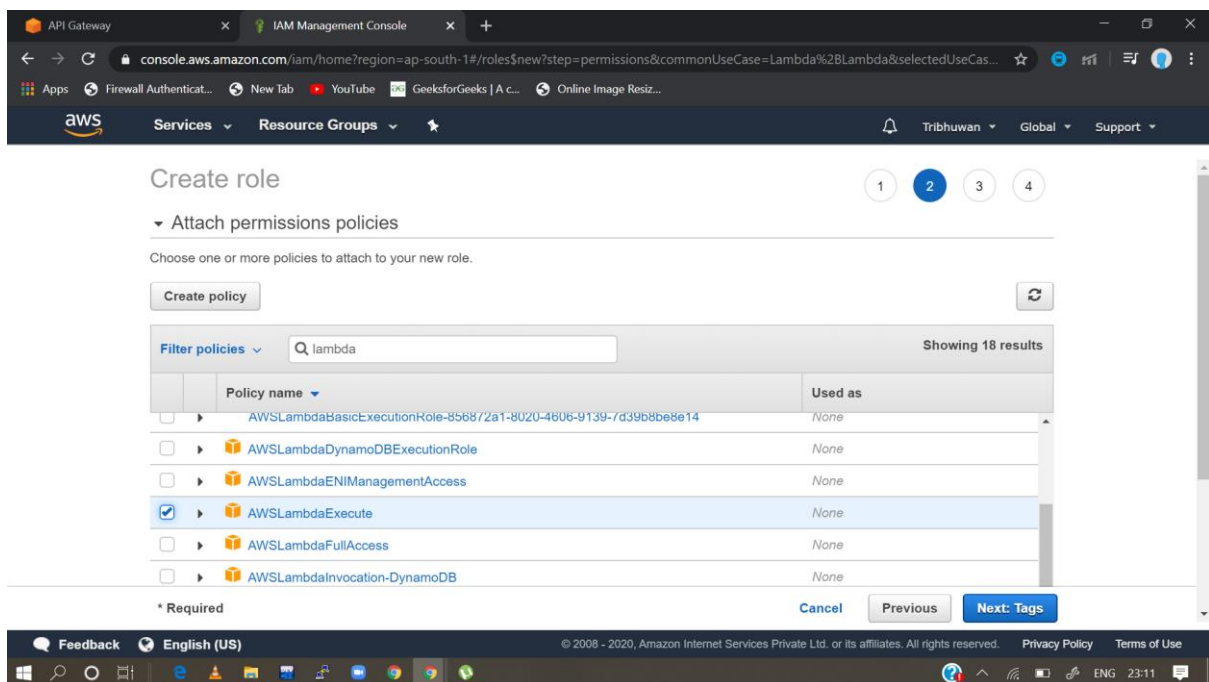

Step 2: then click on the api gateway and choose the protocol do some configuration

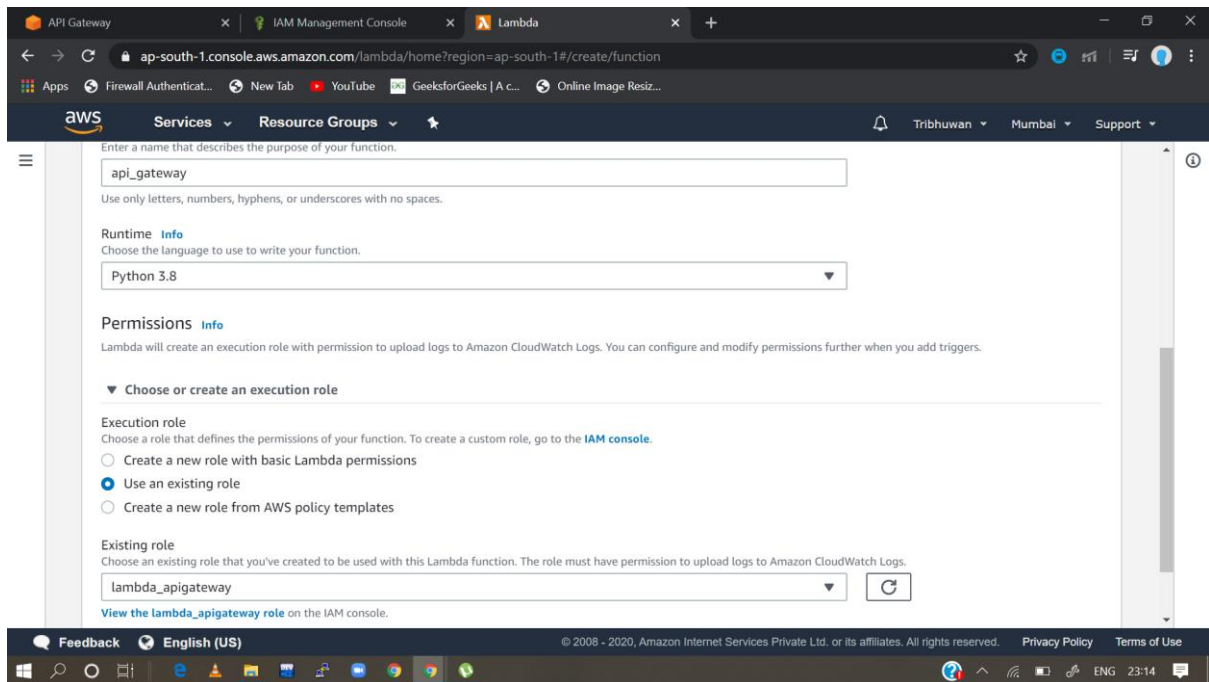

Step 3: Then give IAM and create role and choose lambda as use case

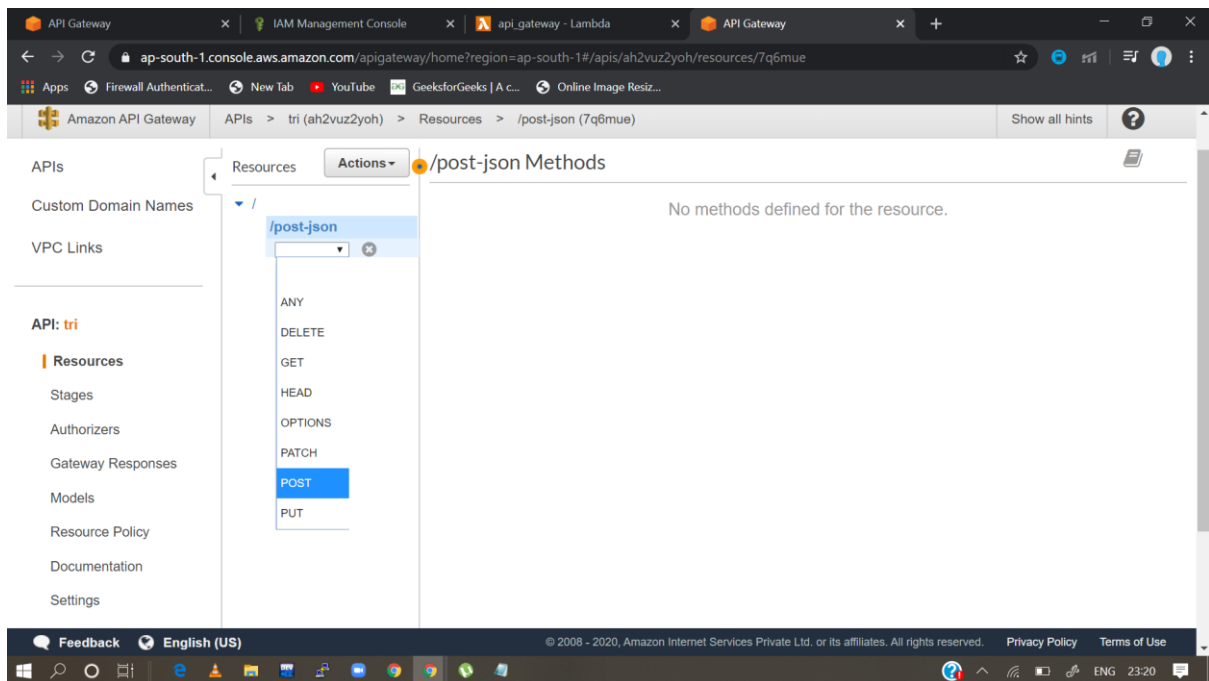

Step 4: Then give policy i.e; AWSLambdaExecute

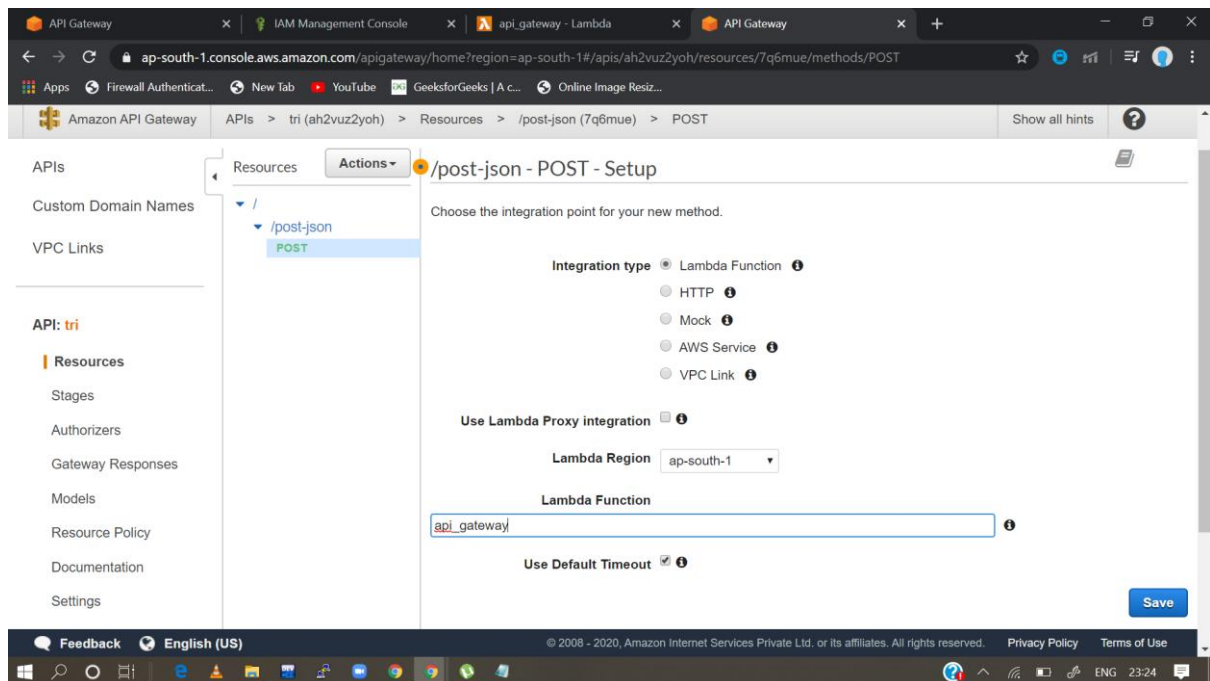

Step 5: Then configure the role and choose existing role

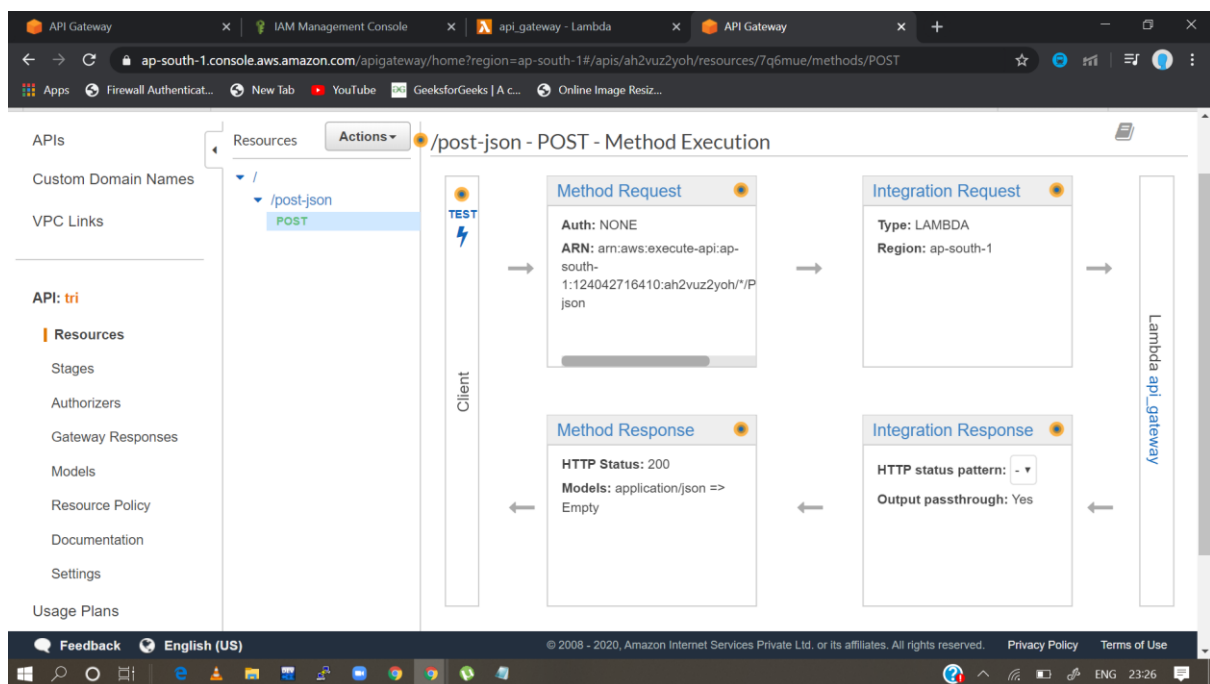

Step 6: Then again go to api gateway and then go to resources and do some configuration and choose any action PUT,POST etc.

Step 7: Then go to post option and do some setting that is give the lambda function name and some other configuration

Step 8: Here is the architecture of the resources and the api gateway

Step 9: In this way we create the general API Gateway and then further deployment and invoking of gateway works.
